

P.E. CONDUITS

High-Density Polyethylene (HDPE)

PRODUCT DESCRIPTION

Polyethylene conduits are designed for reliable cable management and protection in electrical installations. Manufactured from high-density polyethylene (HDPE), they offer excellent flexibility, impact resistance, and durability for both indoor and outdoor applications.

KEY FEATURES

- Durable & Flexible: HDPE construction ensures longevity and adaptability.
- High Impact Resistance: Protects cables from damage in demanding environments.
- Weather & UV Protection: Suitable for outdoor use, resistant to moisture and UV exposure.
- Easy Installation: Flexible structure allows smooth routing of cables.

USAGE & INSTALLATION

- Select the appropriate conduit size based on cable requirements.
- Route cables through the conduits to ensure protection.
- Secure the conduits in place using proper mounting accessories.

SIZE:

The product is available in 23 mm and 16 mm thickness, with length options of 35, 40, and 50 meters.
